

SUNIL JANGID

Bengaluru, India | +91 8888087547 | suniljangid7999@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience designing and building Java / Spring Boot microservices and REST APIs for enterprise financial platforms. Skilled in event-driven architecture with Apache Kafka, relational data modelling with Oracle and PostgreSQL, and cloud-native deployment on Azure (AKS, Key Vault, PostgreSQL DB) using Docker, Kubernetes, and CI/CD. Experienced in large-scale Java modernization (Java 8 to Java 21) and building AI-assisted remediation tooling. Comfortable owning features end-to-end in agile teams, with a founding-engineer background leading a small team to ship a full-stack healthcare platform. Adopts AI-assisted engineering tools while holding output to secure-coding and code-review standards.

TECHNICAL SKILLS

Languages: Java, SQL, Python, C++, JavaScript, TypeScript
Backend & APIs: Spring Boot, Spring Core, REST APIs, RESTful Web Services, Microservices, JDBC, API Design, Swagger/OpenAPI
Messaging & Distributed Systems: Apache Kafka, Event-Driven Architecture, Asynchronous Processing, Distributed Systems, System Design
Data & Persistence: Oracle, PostgreSQL, SQL, Redis (caching)
Cloud & DevOps: Microsoft Azure (AKS, Key Vault, Certificates), Docker, Kubernetes, Jenkins, Git, GitHub Actions, CI/CD
AI-Assisted Engineering: LLM Tool, AI Code Generation, AI Code Review, AI Debugging, Agentic Workflows
Frontend: React.js, JavaScript, TypeScript, HTML5, CSS3
Practices: SDLC, Design Patterns, OOP, Agile/Scrum, Application Resiliency, Scalable Service Design

PROFESSIONAL EXPERIENCE

Société Générale Global Solution Centre – Bengaluru, India

- Full Stack Developer — Personal Account Dealing (PAD) Application

Aug 2024 - Present

 - Design and build **Java / Spring Boot microservices** for an enterprise **compliance platform** monitoring employee trading activity across **5,000+ users**, integrating data from **12+ upstream/downstream systems, multiple brokers, and regulatory filing sources** to support automated **trade reconciliation and compliance monitoring**.
 - Architected multiple **on-prem deployed** applications on **Azure Public Cloud**, setting up AKS, Azure PostgreSQL DB, DNS, Certificates, Key Vaults, etc. and designed automation, **reducing deployment effort by 80%**.
 - Led the migration of enterprise applications from **Java 8 to Java 21** using automated modernization recipes and developed an **AI-powered remediation agent** to identify and resolve vulnerabilities and application issues, **reducing manual effort and remediation time by ~40%**.
 - Perform root-cause analysis and performance tuning on production issues, improving application stability and reducing recurrence.
 - Engineered a **configurable BPMN-based workflow orchestration framework** consolidating multiple workflows into a unified process, enabling **dynamic multi-stage routing and workflow changes through configuration**, reducing engineering effort and accelerating delivery of new business workflows.
- Full Stack Developer — Exception Management Orchestrator

Nov 2024 - June 2025

 - Re-architected an exception management system from a manual, team-dependent workflow into a **BPMN-driven, event-based processing platform**, automating exception routing and resolution workflows, eliminating manual handoffs to downstream teams and **reducing exception-processing effort by ~60%**.
 - Designed Spring Boot micro services and REST APIs supporting enterprise financial workflow orchestration
 - Implemented containerized deployment with **Docker, Kubernetes, and Jenkins CI/CD**, **reducing release cycle time by 45%**.
 - Improved application reliability through monitoring, logging, and troubleshooting, **reducing production incidents by 30%**.
 - Built scalable REST APIs enabling backend integrations across **distributed application workflows**.
- Get Beds Healthcare Platform — Early-stage healthcare start up (side venture)

Oct 2025- Apr 2026

 - Led a 5-member engineering team building a healthcare platform for bed booking, doctor appointments, ambulance services, and medicine delivery.
 - Designed scalable backend architecture using Java, SQL, and REST APIs; built end-to-end digital billing and payment workflows that reduced on-site payment queues and manual effort.
 - Focused product and engineering decisions on digitizing hospital operations to cut patient wait times and improve operational efficiency.

PROJECTS

- Obscenity Detection & Blocker — AICTE Kavach Hackathon 2023 (Runner-Up)

 - Built an AI-powered browser extension (JavaScript, Python, SQL) that detects and filters inappropriate images/videos using ML-based image classification; secured Runner-Up among participating teams.

EDUCATION

Bachelor of Engineering in Computer Engineering

Aug 2020 - Jun 2024

Ajeenkya DY Patil School of Engineering, Pune | SGPA: 9.36 / 10

ACHIEVEMENTS

- Spot Award — Société Générale (2025)
- Newbie Award — Société Générale (2026)
- Agile Master — Société Générale
